The epic journey of Apollo 11: A unique tribute to the defining scientific mission of our time. It has been called the single most historic event of the 20th century: On July 20, 1969, Neil Armstrong, Buzz Aldrin, and Michael Collins met John F. Kennedy's call for a manned Moon landing by the end of the 1960s. A decade of tests and training, a staff of 400,000 engineers and scientists, a budget of billions, and the most powerful rocket ever launched all combined in an unprecedented event watched by millions the world over. And no one captured the men, the mood, and the machinery like Norman Mailer.

One of the greatest writers of the 20th century, Norman Mailer was hired by LIFE magazine in 1969 to cover the Moon shot. He enhanced his reportage in the brilliantly crafted book, *Of a Fire on the Moon*, which is excerpted here. Equally adept at examining the science of space travel and the psychology of the men involved—from Saturn V rocket engineer Wernher von Braun, to the crucial NASA support staff to the three astronauts—Mailer provides provocative and trenchant insights into this epoch-making event.

Illustrating this volume are hundreds of photographs and maps from the NASA vaults, magazine archives, and private collections. These images document the development of the agency and the mission, life inside the command module and on the Moon's surface, and the world's jubilant reaction to the landing. This edition includes an original introduction by Colum McCann and captions by leading Apollo 11 experts, explaining the history and science behind the images, citing the mission log and publications of the day, and postflight astronaut interviews.

A Book Worthy Of Apollo 11's Accomplishments

By Bob Derga

I have been collecting space memorabilia since I was a child - well over 45 years. This without a doubt is the most impressive Apollo 11 book published. I am glad I added it to my collection as it is unlike any other. The book is much bigger and heavier than I expected. The printing and photography are some of the best out there. I was surprised by the fact that some pictures from the surface of the moon I had never seen before. If you are looking for a worthy book to remember Neil Armstrong's first steps on the moon and one of our nation's greatest achievements, look no further.

A cornerstone for you Space library

By J Mack

I have been a collector of American manned space memorabilia for over 25 years, mostly books from the period. This one, highlighting the Apollo 11 mission, is a magnificent work of art. Excellent accounts from Mailer, quotations from astronauts and engineers, and an abundance of rare photos as well as many of the classics. It is well worth the modest price. One note: the book is so massive you won't be able to read it just anywhere!

Best Coffee Table Book on Apollo 11

By N. Law

Easily(!!!!!) the best book out there on the subject of the planning and execution of the first moon landing. Beautiful photographs and detailed information is jam-packed in this! If you are a space buff you will go crazy for this book! I recently visited The Smithsonian National Air and Space Museum in Washington, D.C. and saw this book in the shop. Had to have it.
